

CENTRAL INTELLIGENCE AGENCY

## REPORT

CD NO.

DATE DISTR. 24 February 1953

NO. OF PAGES 1

NO. OF ENCLS.

SUPPLEMENT TO  
REPORT NO.

25X1

25X1

1. The steady decrease in deliveries of pyrites

25X1

has increased the shortages in the processing plants of East Germany. Authorities in East Germany have already considered closing down either the Schwarza synthetic fiber plant or the Coswig (Anhalt) sulphuric acid plant. However, until now it has always been possible at the crucial moment to obtain pyrite deliveries

25X1

by paying excessive commissions.

2. The Construction and Engineering Bureau (KIB) in Leuna has been charged with the reconstruction of a sulphuric acid plant in Muldenhuetten near Freiberg/Saxony. This plant had been dismantled during 1946. After it is completed, the plant is supposed to be capable of burning the locally available deposits of pyrites which, because of fluorine and arsenic contamination, were not exploited heretofore.

3. The operation of the plant was rendered difficult by the unavailability of several important machinery units of which no prototypes were available for copying. The KIB obtained the necessary blueprints against payment

25X1

4. The Soviet Control Commission has ordered 40 copies of the blueprints in order to make them available also to the People's Democracies under their industrial exchange program.
